

How to reduce the cost of heat pumps

February 2022

About Nesta

We are Nesta, the UK's innovation agency for social good. We design, test and scale solutions to society's biggest problems. Our three missions are to give every child a fair start, help people live healthy lives, and create a sustainable future where the economy works for both people and the planet.

For over 20 years, we have worked to support, encourage and inspire

innovation. We work in three roles: as an innovation partner working with frontline organisations to design and test new solutions, as a venture builder supporting new and early stage businesses, and as a system shaper creating the conditions for innovation.

Harnessing the rigour of science and the creativity of design, we work relentlessly to change millions of lives for the better.

Contents

1. Introduction and summary	4
Key findings	6
Recommendations	8
Methods and data sources	10
2. Background to this paper	11
Aims of this paper	11
Heat pumps explained	11
Policy context	15
Development of the market for heat pumps	16
Productivity in the heating industry	18
3. How much does a heat pump cost?	19
Breaking down the cost of a heat pump and installation	23
How much have recent heat pump installations cost?	27
Upfront costs are important, but running costs also have a big bearing on heat pump adoption	32
4. Prospects for reducing costs	33
Modelling cost scenarios for a 2022 installation	33
Estimating future reductions in the cost of heat pumps	39
Financing the upfront cost of heat pumps	42
Barriers to cost reductions	43
5. Conclusions and next steps	45
Nesta's plans for future work	46
Appendix	47
Endnotes	48
